                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to a method for the production of polyhydroxyalkanoic acid (PHA). This can be used as a functional poly. The present sequence is a Pseudomonas jessenii coding sequence which described in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Production of a polyhydroxyalkanoate useful as a functional polymer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Length 1501;

The present invention describes a method of producing a polyhydroxyalkanoate (PHA) using a microbe. This may be Pseudomonas cichorii H45 or Pseudomonas fishorii H45 or Pseudomonas fishorii H50 or Pseudomonas fishorii H50 pHA produced using the method of the invention is useful as a functional polymer. The present sequence is a fragment of the P. jessenii coding

                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to polyhydroxyalkanoates comprising monomer units of diverse structures containing side chain substituents. This sequence represents a Pseudomonas jessenii 161 strain microorganism, capable of synthesising a polyhydroxyalkanoate from an alkanoate. By culturing a microorganism in a medium containing an alkanoate, a polyhydroxyalkanoates can be obtained. Polyhydroxyalkanoates are used as functional polymers, particularly in medical devices and materials. The use of microorganisms yields polymers of high purity and in high yield.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     149
